PROFESSIONAL SUMMARY

Motivated Computer Science & Engineering student specializing in Python backend architecture, computer vision, and AI data pipelines. Strong foundation in software engineering, API integration, and secure system design with a proven track record of leading technical teams in competitive hackathons.

EDUCATION

Swami Vivekananda University — Kolkata, West Bengal, India

2024 – Present

Bachelor of Technology in Computer Science & Engineering | CGPA: 9.11 / 10

TECHNICAL SKILLS

Languages: Python, C, Java, HTML, CSS, SQL

Tools & Platforms: Git, GitHub, Linux Command Line, VS Code

Core Competencies: Data Structures & Algorithms (DSA), System Architecture, Object-Oriented Programming (OOP), Secure Software Design, File I/O, Database Management Systems (DBMS), Operating Systems, Computer Networks

PROJECTS

Phonemex AI — Deepfake & Voice Clone Forensic Detector

Internal SIH 2026

Tech Stack: Python 3.10, PyTorch, ONNX Runtime, OpenCV, Librosa, Flask, React.js, SHA-256

- Engineered an offline, multimodal forensic engine for SIH 2026 combining visual inspection (blinking, facial jitter) and audio verification (Mel-Spectrogram scans).
- Implemented phoneme-viseme lip-sync cross-alignment and INT8 local quantization for 100% offline CPU execution.
- Developed an automated report generator creating court-admissible PDFs signed with cryptographic SHA-256 hashes.

Resumate AI — Smart Resume & Candidate Analyzer

Tech Stack: Python, Flask, MySQL, SQLAlchemy, Git, LLM Endpoints

- Built a scalable profile analysis engine that parses candidate resumes to evaluate skill alignment and structural quality.
- Integrated structured LLM endpoints with role-based evaluation logic to deliver automated, data-driven candidate feedback.

ClinixParse AI — Medical Report Analyzer

Tech Stack: Python, LLM APIs, JSON Schema Validation, Git

- Built a data pipeline converting unstructured diagnostic reports into standardized, machine-readable JSON schemas.
- Enforced strict validation protocols to guarantee data privacy and deterministic schema outputs.

Synthetix AI — Automated Notes Engine

Tech Stack: Python, Flask, MySQL, SQLAlchemy, Git

- Developed a document processing engine that ingests academic texts to summarize and extract structured key-value study material.
- Engineered secure API endpoints with role-based authentication for user workspace management.

LEADERSHIP & EXPERIENCE

Team Lead — Internal Smart India Hackathon (SIH 2026)

- Led Team "Secret Society" in architecting Phonemex AI, directing model quantization, task allocation, and live pitch delivery.

Team Lead — Computer Vision Hackathon

- Directed end-to-end development of a CV-based Face Recognition Attendance System under competitive time constraints.

Team Lead — Technical Fest

- Spearheaded an engineering team in designing, fabricating, and demonstrating a functional Jet Engine Model.
